Education

2023 - 2027

B.Tech.IT

CMR University

Expertise

• PROGRAMMING LANGUAGES

Python • C++ • JavaScript (ES6+) • TypeScript • SQL

• ARTIFICIAL INTELLIGENCE

Generative AI • Large Language Models (LLMs) • Prompt Engineering • Groq API • LLaMA 3.3 70B • RAG • LangChain • LangGraph • Vector Databases • Hybrid Retrieval • Embedding Pipelines • Sentence Transformers • FAISS • Document Processing • Text Chunking • PyMuPDF • pdfplumber

• BACKEND DEVELOPMENT

Node.js • Express.js • FastAPI • REST APIs • JWT Authentication • OAuth 2.0 • GraphQL • WebSockets

• DATABASES & CACHING

PostgreSQL • MongoDB • Redis • Database Design • Query Optimization

• CLOUD & DEVOPS

Docker • Git • GitHub • AWS • Railway • Render • Vercel

• COMPUTER SCIENCE

Data Structures & Algorithms • Object-Oriented Programming • Operating Systems • Database Management Systems (DBMS) • Computer Networks • System Design • Distributed Systems

Daksh Sharma

AI-Full Stack Engineer

AI-focused Full-Stack Developer with hands-on experience building LLM-powered applications, document intelligence systems, and backend APIs using Python, FastAPI, and Node.js. Built production-ready AI and distributed systems projects and was recognized as a Runner-up at AWS Startup Sprint and Top 5 Finalist in Lucio AI Challenge '26. Seeking AI Engineering opportunities focused on intelligent applications and scalable backend systems.

Projects

Lucio AI — Intelligent Legal Document Analysis System

Tech: Python • FastAPI • FAISS • Sentence Transformers •

PyMuPDF • pdfplumber • Rank-BM25 • NumPy • Pandas • asyncio

- Built a document intelligence system capable of ingesting, processing, and analyzing legal documents to deliver context-aware question answering with document names, page-level citations, and supporting evidence.
- Implemented a hybrid retrieval pipeline using FAISS, Sentence Transformers, and BM25 to combine semantic similarity with keyword-based ranking, improving retrieval accuracy across large document collections.
- Developed asynchronous FastAPI services for document ingestion, preprocessing, text chunking, metadata extraction, and retrieval pipelines, reducing query latency while supporting multiple document formats.

NoteForge — AI-Powered Study Assistant

Tech: React.js • Node.js • Express.js • MongoDB • Groq API •

LLaMA 3.3 70B • JWT • Docker • Redis

- Developed an AI-powered study platform using Groq-hosted LLaMA 3.3 70B to generate intelligent summaries, quizzes, flashcards, and personalized study plans from user-provided content.
- Designed secure backend services using Node.js, Express.js, JWT authentication, and MongoDB, following a modular MVC architecture to manage authentication, notes, quizzes, and user data.
- Integrated document processing, intelligent search, PDF export, and Docker-based containerization to provide a consistent deployment workflow and improve application maintainability.

Ushort — Distributed URL Shortener & Analytics Platform

Tech: React.js • TypeScript • FastAPI • MongoDB • Redis • Docker • Redis

- Architected a multi-tenant URL shortening platform using FastAPI, MongoDB, and Redis caching, achieving sub-50ms p95 redirect latency while supporting secure, high-performance URL redirection.
- Designed an event-driven analytics pipeline capable of processing over 10,000 click events per second while collecting geographic location, browser, device, and referrer metadata for real-time traffic insights.
- Implemented JWT authentication, Google OAuth, role-based access control, custom domain routing, and Docker containerization, enabling secure user management and reliable cloud deployment.

Experience

Freelance Full Stack Developer | MSR Services ,Bengaluru |

Aug 2025-Sep 2025

- Designed and deployed a full-stack company web platform,developing responsive frontend interfaces and backend services tailored to business requirements.
- Built secure JWT-authenticated REST APIs using Node.js,Express.js, and role-based access control to protect user authentication, authorization, and application resources.
- Collaborated with stakeholders to gather requirements,implemented features independently, performed testing,deployed the application, and ensured a smooth project and off within the agreed timeline.
